INCLUDED CROPS

 ALMONDS	 CANTALOUPE
 TABLE GRAPES	 COFFEE
 SNAP BEANS	 TOMATOES
 WATERMELONS	

Sugar Express®

Sugar Express® 4-10-40 is a highly refined fertilizer with the appropriate ratio of phosphorus and potassium designed to be used close to harvest.

Sugar Express is a premium quality foliar fertilizer, unique in the market and exclusively offered by Miller. This water-soluble fertilizer product is designed to be used on most crops, improving plant vigor and promoting crop production through the supplementation of necessary nutrient requirements. Incorporating both macro and micronutrients, Miller's exclusive Express Technology is designed to improve nutritional conditions necessary for peak root growth, flowering, fruit development, nutrient availability, color and ripening. This product is compatible to mix with commonly used insecticide, fungicide and miticide programs.

Sugar Express® helps improve normal photosynthetic processes which are a driving force required for brix accumulation

FEATURES

IMPROVES DEPOSITION OF APPLIED NUTRIENTS

INCREASES ABSORPTION AND MOBILITY OF NUTRIENTS BY 10-20%, DEPENDING UPON ENVIRONMENTAL CONDITIONS

MINIMIZES CRYSTALLIZATION OF FERTILIZER ON LEAF SURFACES

HIGH QUALITY INGREDIENTS WITH MINIMAL IMPURITIES

Sugar Express®

BENEFITS

PLANT RESPONSE TO FERTILITY TREATMENTS IS OBSERVED SOONER THAN STANDARD FERTILIZERS

IMPROVES NUTRIENT EFFICIENCY WHICH MAXIMIZES CONDITIONS FOR CROP PRODUCTION, QUALITY AND YIELD

HELPS IMPROVE NORMAL PHOTOSYNTHETIC PROCESSES WHICH ARE A DRIVING FORCE REQUIRED FOR BRIX ACCUMULATION

EARLIER BRIX ACCUMULATION MAY IMPROVE RIPENING AND COLOR WHICH IS NECESSARY FOR UNIFORM QUALITY IN MANY CROPS

HAS THE POTENTIAL TO INCREASE FRUIT FIRMNESS

APPLICATION

KEY CROPS INCLUDE, BUT ARE NOT LIMITED TO: TABLE GRAPES, TOMATOES, CANTALoupES, COFFEE, WATERMELONS AND SNAP BEANS

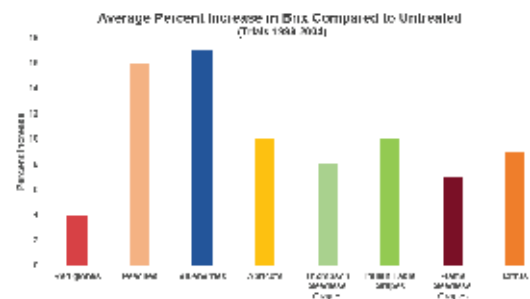

FOLIAR APPLICATION

REVIEW PRODUCT LABEL FOR SPECIFIC APPLICATION RATES AND RECOMMENDATIONS

HOW IT WORKS

Sugar Express® is used as a foliar application to supplement normal soil fertility during plant physiological peak demand periods. This technology utilizes the plant's natural metabolic activity and a proprietary humectant system to significantly increase nutrient uptake and utilization efficiency compared to standard foliar fertilizers. This allows for applied product solutions to remain in a liquid form on the leaf surface for a longer period of time. Maintaining this liquid state allows for a more complete absorption of products, minimizing loss to crystallization on the leaf surface.

All within a single formulation, Sugar Express encompasses a unique range of components required for plant development such as macronutrients, micronutrients, and key amino acids. Nutrient demand is greatest during development and reproductive stages (rooting, flowering, fruit set, crop development, and ripening). Even if your plants look healthy, hidden nutritional and abiotic stressors could be impacting crop yield and quality. Sugar Express contains technology designed to enhance nutrient absorption and mobility in order to provide precise nutrition and energy at critical development stages while also helping to mitigate abiotic stress.
